FAMILY WEB-PAGE RUBRIC

In this assignment you will be creating a series of html documents that are all linked together.

Before you begin watch:
HTML 1 , 2, 3, 4

To earn a B (80%):
- Make one main family page and 4 more individual pages. All pages **MUST** have the following:
  - Create a header with your family name or the individual's name.
  - Include a family photo or photo of the individual.
  - Write a paragraph that describes your family history or interests, etc (any moving you did, interesting shared experiences, family vacations, traditions etc.).
  - Within the navigation have links to all family members and to the main family page.
  - Label the tab.
  - Create a footer with the month and year of the creation of the website.

For an additional 5% each:
- Add a picture in the tab for each family member. Could match their favorite food or color or whatever sums them up. (try googling this, if you are unsuccessful look at the source code for mrnohner.com and see if you can figure out how I did it)
- Add a link to an external website on your family page that tells about your heritage, hobbies or interests in general. For example, I would include a link to a site that discusses German brats and football.
  (Whatever you put here will link to ESPN!
- Add an additional page to your website that is a family quiz with 5 or more questions (make it multiple choice).
- On the family quiz, have each solution be linked to a correct page or an incorrect page. This will allow the user will know if they got the question correct (hint: if you have 5 questions with 4 choices how many of these "is it correct/incorrect" type of page would you have to make? It is not 20 if you're wondering...)
- Add a link to a youtube video or other video for each family member (it can be of them or something that describes them). Make sure to include some text that describes why I will be watching the video I am watching in their page.
- Make those videos embedded within the website. (google html embedding videos and see if you can figure it out)
- Add music to the background of your site. (So not a video basically)
- Change font color and background color

-5% for the following:
- Poor grammar, spelling, or punctuation.
- Improper placement of elements. The head, header, nav, body, and footer all have an order and certain things the can contain and should not contain.
- Each broken link.
